

**GroGreen® Feed&Shine®**  
 Foliar fertiliser for roses (Concentrate)

**HEALTHY ROSES**

GroGreen Feed & Shine concentrate is a specially developed liquid micronutrient fertiliser for all types of roses. Applied once a week, it will ensure that roses stay healthy, strong and resistant towards a wide range of well-known “rose maladies” such as rust, mildew and blackspot.

GroGreen Feed & Shine for roses contains micronutrients, magnesium, the natural plant oils tea tree, clove and citronella, nitrogen and surfactants for maximum leaf uptake. Result: Healthy Roses.

The micronutrients remedy and effectively prevent copper, magnesium, manganese and zinc deficiency, so that the delicate roses can be strengthened and resist disease at all times. The plant oils give the leaves a beautiful shiny appearance, as well as protecting them against wind and weather, and keeping them dry. The nitrogen strengthens leaf growth, making the roses less vulnerable to fungal diseases. The surfactant ensures that it all remains on the leaves and is 100 % absorbed by the plant.

GroGreen Feed & Shine is environmentally friendly and sustainable towards roses and nature in general.

**Use:**

- GroGreen Feed & Shine is concentrated and must be diluted with water in the ratio 1:100, e.g. 0.5 litres of concentrate to 50 litres of water. Apply with a sprayer. Alternatively, use or re-use our ready-to-use refill bottle.
- The product should be sprayed onto the leaves until they are completely covered by the liquid. Stop when the liquid drips from the leaves. Spread on dry leaves in dry weather.
- The amount to apply depends on the size of the plants.
- Used in combination with organic fertilizer GroGreen Feed & Shine is the little extra to ensure healthy roses.
- Roses are “greedy” plants, so it is recommended that you also fertilise them with granular organic fertiliser three times a year.
- The product should be applied once a week from May to September.

**Mixing ratio:**

A half litre of concentrate should be mixed with 50 litres of water.

**Guaranteed content:**

GroGreen Feed & Shine concentrate is a foliar fertiliser with EDTA-chelated micronutrients, nitrogen, plant oils and surfactant for dilution in water. It is green in colour. pH 7,5.

**Storage:**

Store frost free.

Sustainable gardening

*The photos were taken early in the morning before (day 1) and after (day 2) treatment with GroGreen Feed & Shine.*

**Order No.:**  
 500 ml (30660)  
 5 liter (30670)

**Application:**  
 J F M A M J J A S O N D

**Contents:**

Total Nitrogen (N) .....	7.5%
Of which:	
Urea .....	7.5%
Chelated magnesium (Mg) .....	0.50%
Chelated manganese (Mn) .....	0.20%
Chelated zinc (Zn) .....	0.20%
Chelated copper (Cu) .....	0.25%

**Ingredients other than plant nutrients:**

Tea tree oil 0.54%, citronella oil 0.54%, clove oil 0.54% and surfactant 32.3%.

\* EDTA means “fully accessible”.
