

GroGreen® Feed&Shine®
 Foliar fertiliser for roses (Ready for use)

HEALTHY ROSES

GroGreen Feed & Shine ready-to-use is a specially developed liquid foliar fertiliser for all types of roses. Applied once a week, it will ensure that roses stay healthy, strong and resistant towards a wide range of well-known “rose maladies” such as rust, mildew and blackspot.

GroGreen Feed & Shine for roses contains important micronutrients, magnesium, the natural plant oils tea tree, clove and citronella, nitrogen and surfactants for maximum leaf uptake. Result: Healthy Roses.

The micronutrients remedy and effectively prevent copper, magnesium, manganese and zinc deficiency, so that the delicate roses can be strengthened and resist disease. The plant oils give the leaves a beautiful shiny appearance, as well as protecting them against wind and weather, and keeping them dry. The nitrogen strengthens leaf growth, making the roses less vulnerable to fungal diseases. The surfactant ensures that it all remains on the leaves and the nutrition is 100 % absorbed by the plant.

GroGreen Feed & Shine is environmentally friendly and sustainable towards roses and nature in general.

Use:

- The product is ready to use.
- Re-use the ready-to-use bottle. Pour 7.5 ml of Feed & Shine concentrate into the bottle and fill up with water. Mixing ratio 1:100.
- GroGreen Feed & Shine should be sprayed onto the leaves until they are completely covered by the liquid. Stop when the liquid drips from the leaves.
- Spread on dry leaves in dry weather.
- The amount to apply depends on the size of the plants.
- Used in combination with organic fertilizer GroGreen Feed & Shine is the little extra to ensure healthy roses.
- Roses are “greedy” plants, so it is recommended that you also fertilise them with granular organic fertiliser three times a year.
- The product should be applied once a week from May to September.

Guaranteed content:

GroGreen Feed & Shine ready-to-use is a foliar fertiliser with EDTA-chelated micronutrients, nitrogen, natural plant oils and surfactant. It is green in colour.

Storage:

Store frost free.

* EDTA means “fully accessible”.
